

Calidris Bio is a startup company that uses fermentation technology to produce a high-quality protein with a low environmental footprint, to replace fishmeal and soy. The technological and regulatory challenges for use in feed and food are being studied.

To assist the co-founders in the development of the process, Calidris Bio is looking for a

### **Hands-on Fermentation Scientist/Technician**

The job location is the brand-new Bluechem incubator for sustainable chemistry (Olieweg 95, Antwerp, Belgium).

#### The job

In close collaboration with the Calidris Bio co-founders:

- You plan, organize, perform and document research activities, with the aim of optimizing the fermentation processes
- You run the lab and assure a safe operation and good maintenance of the laboratory equipment and test instruments
- You analyze and optimize the processes regarding efficiency, reliability and safety
- You produce and maintain laboratory notes that thoroughly, neatly and accurately record all research activities.

#### Your profile

- You have a Master in bio-engineering or applied biological sciences, or a similar level of expertise
- You have experience in fermentation technology and biochemistry
- You have a broad interest in process technology
- You are a team player, but at the same time a self-starter able to work autonomous
- You are hands-on and you can deal with technical challenges
- You have good communication skills and a good knowledge of English. Knowledge of Dutch is a plus.

#### Offer

- An opportunity to grow with the company in an environment where forward-looking ideas are embraced

You can send your application containing a *curriculum vitae* and a motivation email (or letter) to [info@calidrisbio.com](mailto:info@calidrisbio.com).
